

CONNECTING TO FCHS Student BYOD network

All FCHS Students have the ability to connect 2 personal devices to the NAFCS Student wireless network.

This network is Internet access only.

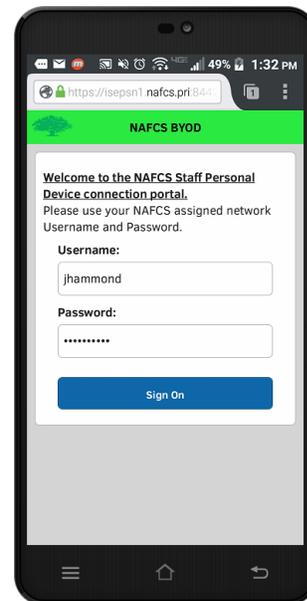

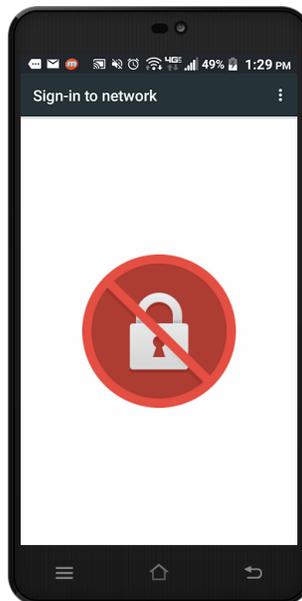

The ESC IT department does not guarantee helpdesk support for personal devices.

STEP ONE: Connect to NAFCSstudent
(Normally found in Setting → WiFi)

STEP TWO: Sign-in on Website (New Android OS will have a Sign-In Screen that does not work, use a browser)

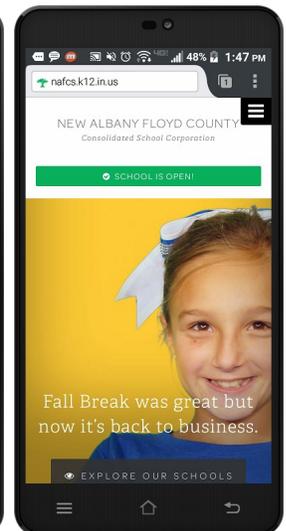

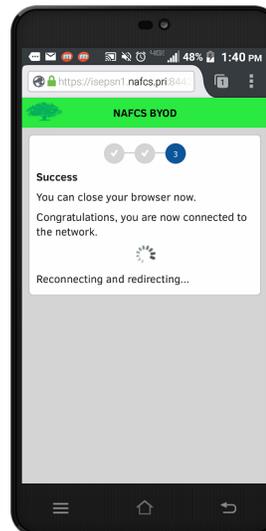

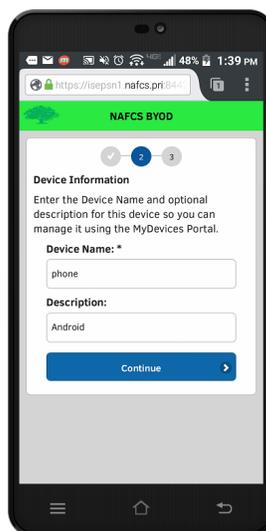

NOTE: When you open the browser you may have to try going to a website other than www.google.com. You will be redirected to the sign-in page. If Chrome does not work try Firefox (or Vic versa). For iPhone Use Safari

Step Three: Tap **START**

Step Four: Name the Device (You may need this for managing them later).
Description is optional. Tap **CONTINUE**

Once you are on the NAFCS homepage, you are connected to the Student network.

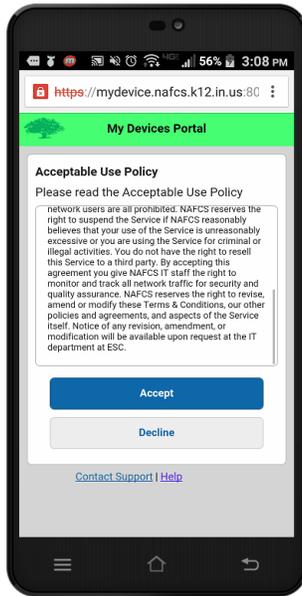

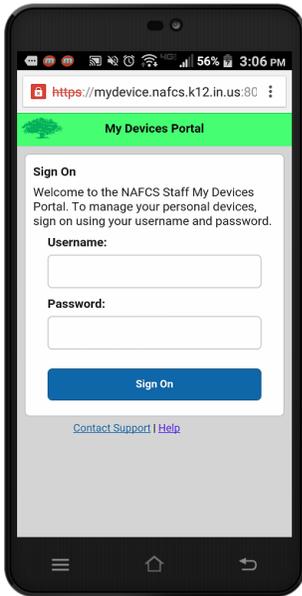

Removing Lost, Stolen, Unused device from Student Network

All students have the ability to have 2 devices on the NAFCSstudent network at a time.

Before you can add your 3rd device you must remove one of your current devices from your account.

If a device is lost or stolen, contact your local IT staff. Labeling the device as lost with block network access for the device but still allow NAFCS IT staff to locate it if still on our network.

Sign-in on Website [StudentDevice.nafcs.k12.in.us](https://mydevice.nafcs.k12.in.us) . You will have to scroll to the Bottom on the AUP page before you can tap **ACCEPT**. This site is available from any device connected to the NAFCS network.

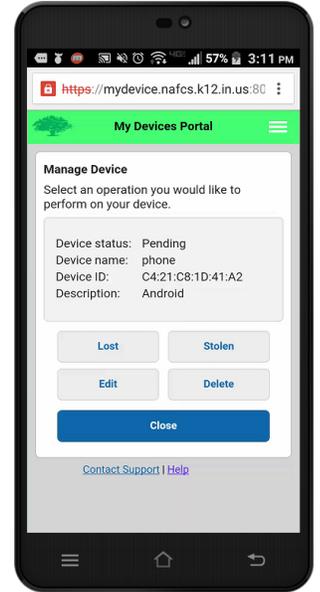

TO REMOVE/LABEL A DEVICE: Tap the managed device you want to remove/label and chose from the following:

Lost or Stolen: Device will be blocked but will still connect to the network for locating purposes.

Delete: Removes the device from the network for the user to add a new device.

Edit: Description is the only thing that can be edited.

TO MANUALLY ADD A DEVICE:

Tap **ADD** → Name the Device and enter the Device ID (MAC Address)

To Find you MAC Address

Android : Settings → Wi-Fi → Advanced → MAC address

iPhone: Settings → General → About → Wi-Fi Address
